Rounak Sonavane

AI Engineer | Agentic Systems | LLM Applications | Full-Stack AI

rounaks7721@gmail.com | +91-7721008000 | github.com/Rounak7721 | linkedin.com/in/rounak-sonavane | Immediate joiner

Profile

AI engineer with 1.5+ years of hands-on AI engineering (internship plus independent work), shipping LLM agents, RAG systems and full-stack AI products end to end; two live with CI/CD. Strongest in Python backends, agents and evals.

Experience

AI Engineer — Independent *Jun 2025 – Present*

- Shipped four AI applications end to end; two (ClauseGuard, ReForge) live on custom domains with CI/CD and monitoring
- Built LLM agents, RAG pipelines and a fine-tuned classifier, improved through evaluation (macro-F1 0.63 to 0.78)
- Self-taught ROS2 and perception in 2025, starting IRIS (6-DOF arm, vision, voice) in Dec; moved into agentic AI in 2026

AI Intern — Ramkrishna Foundry Pvt. Ltd. *Jan 2025 – Apr 2025*

- Built and shipped an LLM-powered chatbot integrated into the company website (Vite, JavaScript, Express)
- Automated lead capture into Google Sheets with analytics, and prototyped LLM features for internal workflows

Tech Stack

Languages	Python, SQL, C++
AI & LLM Systems	LLM Agents, LangGraph, LangChain, RAG, Prompt Engineering, Evals, Fine-Tuning, PyTorch
LLM Providers & Tools	Gemini, Groq, OpenAI API, Ollama, Structured Outputs (Zod), Claude Code
Full-Stack & Data	FastAPI, Pydantic, Flask, Next.js, React, PostgreSQL, Supabase, MongoDB, ChromaDB, FAISS
Infrastructure	Docker, GitHub Actions CI/CD, Vercel, AWS, Cloudflare, Tailscale, Linux, n8n

Projects

ClauseGuard — AI Legal Contract Review Platform clauseguard.rounak.co | github.com/Rounak7721/ClauseGuard | *Aug 2026*

Python, FastAPI, PyTorch, Transformers, LangChain, LangGraph, RAG, Groq, ChromaDB, React, TypeScript, Docker, CI/CD

- Built and deployed a live contract-review platform classifying clauses into 41 CUAD categories with a fine-tuned Legal-BERT model, paired with a deterministic rule-based risk engine that keeps risk scoring reproducible and auditable
- Raised classifier macro-F1 from 0.63 to 0.78 and accuracy from 0.79 to 0.86 by root-causing a training-label conflict and switching checkpoint selection from accuracy to F1
- Engineered a LangGraph tool-calling agent producing RAG-grounded, citation-backed clause reports, with interrupt/resume human-in-the-loop confirmation gating expensive operations
- Automated delivery via GitHub Actions CI/CD building multi-architecture images to GHCR and deploying over Tailscale to a Cloudflare-tunnelled host, with independent n8n uptime monitoring on AWS

ReForge — AI Product Teardown & Concept Builder reforge.rounak.co | github.com/Rounak7721/ReForge | *Aug 2026*

Next.js 15, React 19, TypeScript (strict), Supabase (Postgres, Auth, RLS), Gemini, Groq, Zod, Tailwind, Vercel, Docker

- Took a simple concept to a working, deployed MVP in 72 hours (∼18 hours of hands-on development) through AI-assisted rapid prototyping with Claude Code
- Analyses any website from its text and screenshot, drafts a product concept and starter site, and refines it in plain English
- Designed a vendor-neutral LLM provider layer (Gemini, Groq, OpenAI-compatible) with Zod-validated JSON and fallback; Postgres result caching and rate limits keep running cost at $0
- Secured multi-tenant data with per-command Row Level Security verified via SQL, an SSRF guard and sandboxed previews

MindDesk — Multimodal Agentic AI Platform github.com/Rounak7721/MindDesk | *Mar 2026 – Jun 2026*

Python, Flask, React, LangChain, RAG, Ollama, YOLO, OpenCV, Whisper, PostgreSQL, MongoDB, FAISS, ChromaDB, REST APIs

- Architected a custom plan-and-execute orchestration engine coordinating 17 specialized tools through a decoupled registry, with typed plan validation, retry-repair loops and cross-step result chaining
- Built a document intelligence pipeline for semantic retrieval across 4 document formats using FAISS and ChromaDB
- Unified computer vision, speech processing, document intelligence and IoT automation into one locally-hosted platform with per-task model routing and role-based access control

Agentic Lead Qualification Automation github.com/Rounak7721/ai-lead-qualification-system | *Apr 2026*

n8n, LLMs, LLaMA, Groq, Ollama, JavaScript, REST APIs, Webhooks, Airtable, Slack, Google Sheets

- Built an automated lead capture, LLM scoring, tiering and routing pipeline with idempotent notification flags preventing duplicate alerts across real-time and scheduled workflows
- Separated live CRM state from an append-only audit log, with hybrid cloud and local LLM deployment for privacy

Education & Additional

B.Tech in Artificial Intelligence & Machine Learning — Sanjay Ghodawat University *Jun 2025*

Also built: a MediaPipe gesture-controlled virtual mouse (2024)

Languages: English, Hindi, Marathi
